Festo SE & Co. KG and the University of Tübingen will be working together in the field of artificial intelligence (AI) research in the future. The cooperation partners recently signed an agreement on joint research activities for autonomous systems: As part of an "Industry on Campus" cooperation, Festo is setting up an AI laboratory at the university.

Autonomous systems are needed in production in order to manufacture individual products efficiently. They are adaptable and can solve tasks independently and adapt again and again: From transportation systems within a plant to flexible production systems and quality control, autonomous systems are one of the key technologies for the smart factory of the future. So-called collaborative robots can learn from each other and support humans in repetitive and tedious tasks. The potential for AI-based applications to increase overall plant efficiency in production is enormous. This is why Festo has decided to focus its AI laboratory on autonomous systems research.

About Festo

Festo is a global player and an independent family-owned company with headquarters in Esslingen am Neckar, Germany. Festo has set standards in industrial automation technology and technical education ever since its establishment, thereby making a contribution to sustainable development of the environment, the economy and society. The company supplies pneumatic and electrical automation technology to 300,000 customers of factory and process automation in over 35 industries. Digitalization, AI and the LifeTech sector with medical technology and laboratory automation are becoming increasingly important. The products and services are available in 176 countries. With about 20,600 employees in over 250 branch offices in around 60 countries worldwide, Festo achieved a turnover of around €3.45 billion in 2024. More than 8% of this turnover is invested in research and development. In this learning company, 1.5 % of turnover is invested in basic and further training. Festo Didactic SE is a leading provider of technical education and training and offers its customers worldwide comprehensive digital and physical learning solutions in the industrial environment.
